SUMMARY

Experienced Tech Manager, Architect, Tech Lead and Software Engineer with a proven track record of leading and contributing to large-scale projects in cloud computing, microservices, and enterprise applications. Skilled in designing and implementing solutions using Java, Spring Boot, AWS, Azure, and various web technologies. Expertise in API development, system integration, and optimizing infrastructure for high availability and scalability. Adept at applying Agile methodologies and leading teams in cross-functional environments. Strong background in managing and mentoring teams, optimizing processes, and driving successful project delivery for a wide range of clients across industries.

PROFESSIONAL EXPERIENCE

Globant 1 year 11 months

Java Developer, Architect

September 2026 – Present (2 months)

Cartagena de Indias

Client/Project: **Daxia (Collections Application)**

Role: **System Architect & Fullstack Developer**

I served as the System Architect and Fullstack Developer for Daxia, an application dedicated to managing collections (colectas). I spearheaded the end-to-end architectural design and hands-on development of the platform, building scalable backend services and responsive user interfaces to streamline the entire collections process.

Technologies: Java 25, Spring Boot, React.js, System Architecture, Fullstack Development, API Design, Microservices.

Fullstack Developer, Tech Lead

March 2026 – September 2026 (7 months)

Cartagena de Indias

Client: **YPF Argentina (Project: Supplai)**

I served as Technical Lead for a team of 4 frontend developers, 4 backend developers, and 2 QA engineers. We developed 20 AI agents for managing purchase requests, specifications, and technical evaluation matrices for the oil company YPF in Argentina.

Technologies: Python 3.12.x, FastAPI, Langraph, DevOps, SonarQube, React.js, Azure, CopilotKit V2, Technical Debt Management, AI Agent Development.

Java Developer Lvl 3, Architect

January 2026 – March 2026 (3 months)

Cartagena de Indias

Customer: Global 66 (Chile)

Performed an expert technical review to identify and reduce architectural issues and technical debt across the company's systems. Provided actionable recommendations to improve code quality, scalability, and maintainability, collaborating closely with engineering teams to strengthen cloud and DevOps practices.

Technologies: Java 17, Spring Boot, AWS (Lambdas), DevOps, SonarQube, Vue.js, Cloud Architecture, Technical Debt Management, Expert Review

Java Developer Lvl 3, Architect

November 2025 – December 2025 (2 months)

Cartagena de Indias, Bolívar, Colombia

Customer: Banco de Chile (Chile)

Conducted a series of workshops to assess the organization's technology landscape and define actionable steps for implementing Golden Paths within the bank's Internal Developer Platform (IDP), with the objective of adopting a Platform Engineering vision. Worked with engineering and product teams to map current practices, identify gaps, and propose prioritized improvements for tooling, governance, and developer experience.

Technologies: Platform Engineering, Internal Developer Platform (IDP), Golden Paths, Backstage.io, DevSecOps, Agile Workshops

Software Engineer

May 2025 – November 2025 (7 months)

Customer: Disney Entertainment (USA)

Contributed to the development of cloud-native backend services powering Disney's digital platforms, with a focus on scalability, performance, and maintainability. Worked with Java 21 and Scala to build microservices, using Smithy for API modeling. Managed infrastructure using Terraform (IaC) and deployments with Spinnaker, leveraging Docker and Kubernetes for containerization and orchestration.

Integrated Elasticsearch for search and analytics functionality, and used Datadog for monitoring and observability. Participated in performance analysis and helped improve system responsiveness. Collaborated within an Agile team and followed CI/CD practices to ensure continuous delivery.

Technologies: Java 21, Scala, Smithy, Terraform, AWS (RDS, Kinesis, CloudWatch), Elasticsearch, Datadog, Docker, Kubernetes, Spinnaker, Microservices, CI/CD, Data Analysis, IaC, Agile, Python, TypeScript, k6

Tech Manager

March 2025 – May 2025 (3 months)

Cartagena de Indias, Bolívar, Colombia

Customer: Coto Supermarkets (Argentina)

Led the architecture and development of a Digital Wallet solution focused on secure digital payments and seamless integration with Coto's retail systems. Designed a scalable, cloud-native platform using AWS Lambda, API Gateway, RDS PostgreSQL, and EKS. Directed backend development in .NET/C# and frontend in React Native and AngularJS. Implemented asynchronous communication through SQS and ensured compliance with transactional and security standards.

Activities and Technologies: AWS / .Net / C# / RDS PostgreSQL / SQS / EKS / AWS Lambda / API Gateway / React Native / Angular JS

Tech Manager

December 2024 – March 2025 (4 months)

Colombia

Customer: Fiserv (Argentina)

Led the modernization of a legacy Java 1.6 and Struts 2 application. Upgraded to Java 17 and migrated to Spring Boot 3, improving performance and maintainability. Resolved security issues flagged by Fortify and Sonatype. Delivered RESTful APIs and enhanced front-end features using JavaScript and jQuery.

Activities and Technologies: Eliminated Fortify and Sonatype vulnerabilities / Implemented Springboot 3 and upgraded to Java 17 / Java / Struts / Springboot / API Rest / Javascript / JQuery

Dualboot Partners

Senior Java Developer

November 2024 – May 2025 (7 months)

Cartagena de Indias, Bolívar, Colombia

Customer: Lexipol (USA)

Developed serverless APIs using AWS Lambda, API Gateway, and Step Functions. Integrated RDS (Aurora) for persistent data, implemented event-driven flows with EventBridge, and wrote unit tests with Spock. Used Java 21 for modern, efficient code. Collaborated in an Agile/Scrum environment using Jira and Bitbucket.

Activities and Technologies: Lambda-based serverless API development / Step function development / API Gateway / Event Grid / Lambdas / RDS / Spock / Java 21 / Bitbucket / Jira / Scrum

Belcorp

Tech Manager

July 2024 – November 2024 (5 months)

Bogotá, Distrito Capital, Colombia

Led cross-functional Android, frontend, and backend teams in the development of Salesforce and Somos Belcorp applications across 12 LATAM countries. Oversaw architecture, staffing, and budgeting, delivering scalable solutions to support campaign, order, and consultant management (Somos Belcorp) and advanced sales tracking (Salesforce). Technologies included AWS, .NET, TypeScript, Kotlin (Android), MongoDB, and SQL Server, applying Agile Scrum practices throughout the project lifecycle.

Activities and Technologies: Development and implementation of APIs using Typescript / .Net / Scrum / AWS / MongoDB / SQL Server / Staffing / Budget Management / Leadership / Android Kotlin

Globant 2 years 5 months

Tech Manager

November 2023 – July 2024 (9 months)

Cartagena de Indias, Bolívar, Colombia

Customer: Dinet Perú (Project: Lastmile)

Led Android, frontend, and backend teams in building Lastmile, a logistics application designed to optimize final delivery operations. Oversaw architectural decisions, staffing, and budget, ensuring scalable, high-performance APIs using Java (Spring Boot) and Clean Architecture. Leveraged Azure AKS, Service Bus, Redis Cache, and PostgreSQL, while applying Agile Scrum practices and leading development with React.js and Kotlin for Android.

Activities and Technologies: Development and implementation of APIs using JAVA and Spring Boot / Clean Architecture Implementation / Scrum / Microsoft Azure / Service Bus / Postgres SQL / AKS / Redis Cache / Staffing / Budget Management / Leadership / React.js / Android Kotlin

Java Developer Lvl 3, Tech Lead

April 2023 – October 2023 (7 months)

Colombia

Customer: RedLink Argentina (Project: Redlink Wallet)

Designed and led the development of a scalable and secure digital wallet for financial operations across mobile and web platforms, aligned with top-tier banking standards in Argentina. Architected a microservices-based solution deployed on OpenShift, ensuring interoperability with legacy systems, high availability, and low-latency responses for critical operations. Applied Clean Architecture, integrated Redis for performance, and implemented Kafka for real-time, event-driven communication. Secured backend services using Spring Security and JWT, and improved deployment reliability with ArgoCD CI/CD pipelines. Enhanced quality through TestContainers-based integration tests and observability using Prometheus and Grafana.

Activities and Technologies: API Rest Full / OpenShift / Argo / Redis Cache / JAVA / Spring Boot / Apache Kafka / Oracle / Spring Security / JWT / Reactive Programming / Test Containers / Junit / MockMvc

Java Developer Lvl 3, Architect

February 2023 – March 2023 (2 months)

Colombia

Customer: Primax Connections (Project: Loyalty)

Contributed to the development of a loyalty platform as part of the DriveWealth initiative, focusing on the design and implementation of RESTful APIs using Java and Spring Boot. Ensured code quality through unit testing with JUnit4, Mockito, and PowerMock, and actively participated in Scrum ceremonies. Enhanced observability and operational visibility using SumoLogic, and supported caching strategies with Redis in an ECS-based infrastructure.

Activities and Technologies: API Rest Full / ECS / Jira / Redis Cache / JAVA / Spring Boot.

Java Developer, Senior Developer

November 2022 – February 2023 (4 months)

Cartagena de Indias, Bolívar, Colombia

Customer: Drivewealth Capacity

Participated in the development of a financial platform, delivering RESTful APIs using Java and Spring Boot. Responsible for building robust unit tests with JUnit4, Mockito, and PowerMock, and contributed to Scrum-based development. Applied SumoLogic for software monitoring and used Redis for improving data access performance within an ECS-hosted environment.

Activities and Technologies: API Rest Full / ECS / Jira / Redis Cache / JAVA / Spring Boot.

Java Developer Lvl 3, Architect

March 2022 – November 2022 (9 months)

Colombia

Customer: AbinBev - Quilmes (Project: Local Tax Engine)

Led the design of a microservices-based and hexagonal architecture solution to support local tax calculations. Developed REST APIs using Java and Spring Boot, collaborated on data modeling, stored procedures, and functions in SQL Server. Temporarily assumed Tech Manager responsibilities during a leadership transition. Worked within a Scrum team and deployed to Azure AKS, using Service Bus, Data Factory, Redis, and Azure DevOps for CI/CD and API management.

Activities and Technologies: Development and implementation of APIs using JAVA and Spring Boot / Clean Architecture Implementation. / Scrum Developer / Draw.io / SQL Server / Azure Service Bus / Azure DataFactory / AKS / Azure DevOps / APIM / Redis Cache.

EPAM Anywhere

Software Engineer

January 2022 – March 2022 (3 months)

Colombia

Contributed to the development of Video on Demand APIs for NBC, focusing on decoupling strategies to enhance scalability and maintainability. Participated in research and solution design, working within a cloud-native environment using AWS services to support media delivery infrastructure.

Activities and Technologies: API development for Video on Demand using Java / Research on API decoupling strategies / AWS Cloud Lab Setup / Scrum methodology / Software Engineering for Media Streaming Platforms

Bancolombia

Software Engineer

July 2021 – January 2022 (7 months)

Colombia

Worked as part of the Business Credit and Neon projects at Bancolombia. In the Business Credit project, supported corporate services offering self-managed loans to small and medium-sized businesses, implementing over 20 microservices on AWS. In the Neon project, facilitated the migration of on-premises components to the AWS cloud. Key contributions included developing APIs using Java and Spring Boot, implementing Clean Architecture, consuming AWS SQS services, managing Azure DevOps pipelines, and using AWS Lambda for data migration from S3 to DynamoDB.

Activities and Technologies: API development using Java and Spring Boot / Clean Architecture implementation / Microservices in Amazon Cloud / AWS SQS consumption with Java and Spring Boot / AWS Lambda for data migration from S3 to DynamoDB / Azure DevOps for pipeline management and application testing / Scrum methodology / Migration of on-premises components to AWS

Asercol S.A. OEA

Senior Developer

January 2020 – June 2021 (1 year 6 months)

Colombia

Worked as part of the Innovation and Systems team, focusing on the development of control and monitoring systems for merchandise. These systems included real-time alerting and tracking for both clients and operations personnel. Developed and implemented several key systems, including the new version of the Asercol WebSystem, work order management system, and Asercol Central. Key technologies used included PHP7, Laravel 6.x, MariaDB, JSON, and Bootstrap 4. Additionally, managed data migration between databases and developed Webservice API Rest integrations.

Activities and Technologies: API development for merchandise tracking systems using PHP7 / Real-time alerting and tracking integration / Webservice API Rest development / Data migration between databases / PHP Laravel framework / Scrum methodology.

Colcard Cartagena

IT Supervisor

November 2016 – January 2020 (3 years 3 months)

Cartagena de Indias, Bolívar, Colombia

Worked as part of a team managing applications and infrastructure for Transcaribe S.A., supporting the mass transport system in Cartagena. Developed key features such as the PSE Online Recharges module and the Online Balances Consultation module on the website www.colcard.com. Additionally, implemented information panels in Transcaribe stations to display real-time data.

Activities and Technologies: API development (Webservice API Rest) / PHP, MariaDB, jQuery / Server management (Ubuntu Server) / Crontab for task scheduling / Development of transport system features / Frontend with Foundation Zurb CSS.

Comfamiliar Cartagena y Bolívar

IT Analyst

July 2015 – November 2016 (1 year 5 months)

Cartagena de Indias, Bolívar, Colombia

As an IT Analyst at Comfamiliar, provided technical support for hardware and software while developing applications to automate and integrate processes across strategic business units. Managed databases including MS SQL Server, Firebird 2.0, and MySQL, and developed applications using Java and C# .NET.

Activities and Technologies: Technical support for hardware/software / Database administration (MS SQL Server, Firebird, MySQL) / Application development (Java, C# .NET) / Process automation and integration.

RedTic

Software Coordinator

January 2014 – January 2015 (1 year 1 month)

Cartagena de Indias, Bolívar, Colombia

As a Software Coordinator at Redtic, coordinated development projects for clients including newspapers and other companies. Led website design using Drupal and responsive themes, provided consulting for WordPress platforms, and supported VPS on CentOS with WHM CPanel.

Activities and Technologies: Project coordination for clients / Website design (Drupal, responsive themes) / WordPress consulting / VPS support (CentOS, WHM CPanel).

PSA BDP

IT Assistant

January 2013 – January 2014 (1 year 1 month)

Cartagena de Indias, Bolívar, Colombia

As a Software Coordinator at BDP International, responsible for technical support of hardware and software, and led the implementation of the BDP Smart logistics tracking software in Colombia. Also handled Helpdesk support and implemented GLPI software for Helpdesk management.

Activities and Technologies: Hardware/software technical support / BDP Smart logistics tracking software implementation / Helpdesk support (GLPI) / Software implementation (GLPI for Helpdesk management).

Comfamiliar Cartagena y Bolívar

.NET Junior Developer

February 2012 – August 2012 (7 months)

Cartagena de Indias, Bolívar, Colombia

As a .NET Junior Developer at COMFAMILIAR Cartagena, responsible for developing a cost and expense management solution using Excel, Access, and MySQL. Developed apps in C# .NET with DevExpress framework and created stored procedures in T-SQL. Also contributed to the development of 13 modules for the Synergia Web EPS Application, a system for managing records and reports of affiliates and procedures.

Activities and Technologies: Cost and expense management solution development / C# .NET / DevExpress framework / T-SQL / Synergia Web EPS Application (13 modules) / MySQL / Excel / Access.

Centro Nacional de Productividad

Junior Specialist

February 2012 – August 2012 (7 months)

Activities and Technologies:

- Development of Financial Solution for budgets (MS EXCEL, Visual Basic Application (Macros)).
- Advisor in the management of cost and expense reduction for the company Comfamiliar Cartagena.

EDUCATION

Universidad EAN — July 2024 – May 2025
Specialization in Machine Learning, System Engineering

Universidad Europea del Atlántico — December 2020 – April 2023
Master in Strategic Management in Software Engineering

Universidad Internacional Iberoamericana de México (UNINI México) — December 2020 – April 2023
Master of Strategic Management in Software Engineering, Computer Engineering

Universidad de Cartagena - Colombia — February 2019 – September 2020
Specialization in Administrative Management, Economics

Universidad de Cartagena - Colombia — July 2013 – September 2018
Business Administration, Economics

Comfenalco Technological University Foundation — 2012 – 2016
System Engineering

National Learning Service (SENA) — 2016
Technological Specialization in Database Management and Security

American-Colombian Center — 2012
English like a Foreign Language

Comfenalco Technological University Foundation — 2006 – 2010
Information Systems Technology
