state CHECK (lifecycles of DISENO 3.8.2):
campaign: RUNNING <-> PAUSED (API or automatic pause, RNF-035); RUNNING -> COMPLETED
firm_progress: PENDING -> IN_PROGRESS -> COMPLETED (saga)
reconciliation_run: RUNNING -> COMPLETED (emits ReconciliationRunCompleted.v1, EV-27)
inbox: PROCESSED (constant, purged after TTL_dedupe)
outbox: PENDING -> PUBLISHED (relay); published rows purged after TTL_outbox
drift_finding: ACTIVE (constant)
campaign.kind CHECK: CATALOG | EXPORT. reconciliation_run.kind CHECK: EXPORT | SAMPLE | TARGETED;
scope CHECK (TARGETED runs): TEMPLATE | FIRM | ENGAGEMENTS.
drift_finding.kind CHECK: VERSION_MISMATCH | MISSING_IN_INDEX | ARCHIVED_IN_SOURCE.
firm_progress.current_job_id: the one fan-out job in flight per firm (cancelled on pause, DEC-24).
campaign.version: optimistic concurrency (DISENO).
firm_progress.updated_at = DISENO updated_at (merged with the audit field).

Indexes -> access pattern (DISENO S5 (c)):
firm_progress(campaign_id, state, priority) -> AP-D1 next batch of firms by priority
PK firm_progress(campaign_id, firm_id) + SELECT ... FOR UPDATE SKIP LOCKED -> AP-D2 advance catalog cursor
PK campaign / firm_progress aggregates -> AP-D3 coverage per campaign
PK drift_finding(run_id, template_id, kind) -> AP-D4 drift reports by template
PK inbox(event_id) -> dedupe in the same transaction as the saga step (DISENO S5 (g)); purge > TTL_dedupe
outbox(created_at) WHERE state='PENDING' -> relay (ADR-019, DISENO 3.8.3)
Publishes EngagementDiscovered.v1 (discoveryBatchId = {campaignId|runId}:firmId:cursor, DEC-26), ReconciliationRunCompleted.v1,
commands StartFanOutJob.v1, EnqueueFanOutTasks.v1, CancelFanOutJob.v1 (pause), RetryFanOutTasks.v1 (resume),
RecomputeEngagementOffers.v1 (runs) through the outbox.
Residency: PER CELL (firm_id stays in the cell; nothing crosses regions).
